

LIMU Experience

Prof. Adel I. Altawaty

MBChB, DCH, CABP, JMHPE

Health Professional Educationist

Traditional teaching/training has been practiced in different forms for thousands of years. Developments in neurosciences and educational psychology shed lights on mechanisms of learning. The mainstream of discoveries was on the importance of active involvement of students in the process of learning and even assessment. New strategies of teaching, learning and assessment were developed. This presentation will focus on the journey of the Libyan International Medical University in the implementation of different strategies of active learning, challenges faced, and ways of conquering the limited resources and the resistance to change.
