

**Promoting Research Culture among Students in
Undergraduate Medical Education**

**El Said M. Abdel Hady
MBBCh, MSc, PhD, FRCOG
Professor in Obstetrics and Gynecology**

Undergraduate medical education is an ever changing field. Educating medical students should aim at graduating medical practitioners as well as researchers. Promoting research by incorporating modules on research methodology, biostatistics, research ethics, evidence based medicine is proven successful in getting students motivated to be involved in scientific research both at undergraduate and postgraduate levels. We aim to present the experience of Mansoura Manchester programme in promoting research activities at under- and postgraduate levels.
